(iii) BOD shall be allowed up to 350 mg/l for discharge into a town sewer, if such sewer leads to a secondary biological treatment system.

(iv) Suspended solids shall be allowed up to 450 mg/l for discharge into a town sewer, if such sewer leads to a secondary biological treatment system.

70. BOILERS(SMALL)

* to meet the respective standards, cyclone/multicyclone is recommended as control equipment with the boiler.

** to meet the standard, bag filter/ESP is recommended as control equipment with the boiler.

Note:

(i) 12% of CO$_2$ correction shall be the reference value for particulate matter emission standards for all categories of boilers.

(ii) These limits shall supercede the earlier limits notified under Schedule I at serial number 34 of Environment (Protection) Act, 1986 vide notification GSR 742(E), dated 30th August, 1990.

(iii) Stack Height for small Boilers.
For the small boilers using coal or liquid fuels, the required stack height with the boiler shall be calculated by using the formula.

$$H = 14Q^{0.3}$$

Where $H$—Total stack height in metres from the ground level.

$Q$—SO$_2$ emission rate in kg/hr.
In no case the stack height shall be less than 11 metres.

Where providing all stacks are not feasible using above formula the limit of 400 mg/Nm$^3$ for SO$_2$ emission shall be met by providing necessary control equipment with a minimum stack height of 11 metres.

(ii) Additional Parameters mg/l

(a) Heavy metal
   Copper                       1.0
   Manganese                   1.0
   Zinc                        1.0
   Mercury                     0.01
   Tin                         0.1
   Any other like Nickel shall not exceed 5 times the drinking water standards (BIS) individually.

(b) Organics
   Phenol & Phenolic Compounds as C$_6$H$_5$OH 1.0

(c) Inorganics
   Arsenic as AS    0.2
   Cyanide as CN   0.2
   Nitrate as NO$_3$ 50
   Phosphate as P 5.0
