76. EMISSION STANDARD FOR SO₂ FROM CUPOLA FURNACE:

Standard for Sulphur Dioxide emission from Cupola Furnace:

Characteristics	Emission limit		
Sulphur dioxide (SO ₂) emission	300 mg/Nm ³ at 12% CO ₂ corrections		

To achieve the standard, foundries may install scrubber, followed by a stack six times the diameter of the Cupola beyond the charging door.

Note: In case due to some technical reasons, installation of scrubber is not possible, then value of SO_2 to the ambient air has to be effected through the stack height.
