## 1. Background

Central Pollution Control Board (CPCB) in collaboration with Indian Institute of Technology (IIT), Delhi had carried out comprehensive environmental assessment of 88 prominent industrial clusters during 2009-10 based on Comprehensive Environmental Pollution Index (CEPI) criteria. CEPI is a rational number between 0 and 100, assigned to a given location to characterize the environmental quality following the algorithm of source, pathway and receptor. Out of identified 88 prominent industrial clusters, 43 industrial clusters in 16 States having CEPI score of 70 and above are identified as Critically Polluted Industrial Clusters. Further, 32 industrial clusters with CEPI scores between 60 & 70 are categorized as severely polluted areas.

Subsequently, Ministry of Environment, Forest and Climate Change, GoI had imposed a temporary moratorium vide O. M. 13.01.2010 on consideration of developmental projects in critically polluted industrial cluster/areas including the projects in pipeline for Environmental Clearance. Thereafter, action plans for each of abovementioned critical clusters was submitted by Uttar Pradesh Pollution Control Board and implemented after approval of CPCB and eventually moratorium was lifted by MoEF&CC as satisfactory improvement in CEPI scores was reported in these clusters.

Since 2009-10, CPCB has been doing routine monitoring in industrial clusters identified under CEPI through third party and releasing amended CEPI scores on basis of results. Based on these monitoring results, CEPI score of Ghaziabad was calculated as 87.37 in 2009-10 and has been improving since then, details of same have been tabulated in Table.

S. No.	Year	Air Score	Water Score	Land Score	CEPI Score
1	2009	-	-	-	87.37
3	2013	69.50	76.00	48.75	84.13
5	2018	57.50	66.00	32.35	72.30

**Table 1: CEPI Scores of Ghaziabad since 2009-10.**

## Revised CEPI

With a concept to promote industrial development consistent with the environmental objectives and understanding the fact that the original concept and calculation of CEPI score was based on verticals where subjectivity was involved, in order to overcome the subjectivity, revised concept retaining the factors which can be measured/monitored precisely was drafted by CPCB in 2015 and finalized in 2016. The revised criteria for CEPI has been based on following principles:

- Revised concept is prepared by eliminating the debatable factors but retaining the factors which can be measured precisely.
- To develop the Comprehensive Environmental Pollution Index (CEPI) retaining the existing algorithm of Source, Pathway and Receptor.
- Develop the Revised CEPI considering the sources of pollution, real time observed values of the pollutants in the ambient air, surface water and ground water of the industrial cluster and health related statistics. The concept is based on the selection of 3 criteria pollutants for each of the environment components i.e. air, surface water and ground water which together indicate the well being of ambient environment.
- Assessment of environmental quality of the area based on the concept of SNLF to which is a surrogate number representing the level of exposure (a function of percentage sample exceedance and Exceedance factor)
- Health related statistics to be based on health data available from major hospitals in the area.

The scoring format has also been restructured in Revised CEPI, same is detailed in Table 2.

Component A	Scale of Industrial Activity	20 Marks
Component B	Status of ambient environmental quality (air/surface water/ground water)	50 Marks
Component C	Health related statistics	10 Marks
Component D	Compliance status of industries	20 Marks

**Table 2: Revised CEPI Scoring Format**

Based on latest CEPI scores, there are total 13 Polluted industrial Areas (PIAs) in the State of Uttar Pradesh, out of which 9 are critically polluted Areas (CPAs) namely Mathura, Kanpur, Moradabad, Varanasi-Mirzapur, Bulandshahar-Khurja, Firozabad, Gajraula area, Agra, Ghaziabad and 4 are severely Polluted Area viz. Noida, Meerut, Aligarh, Singrauli (UP& MP). As mentioned above, CEPI score for Ghaziabad's industrial clusters is 72.30 as per latest score.

## 2. Area Details

At the time of conceptualization of CEPI, District Ghaziabad was spread across an area of around 1933.3 square-kilometer, however, in 2011 District Hapur was carved out of it and its present area is around 1273 square-kilometers. Thus, in present scenario polluted industrial clusters listed under Ghaziabad region include certain areas of District Hapur as well. Details of same are presented in Table 3.

\*Philkhua industrial cluster falls under District Hapur.

**Table 3:** Details of Polluted Industrial Clusters in Ghaziabad Region

The Table above highlights that presently 06 polluted industrial clusters in Ghaziabad/Hapur region have been identified as polluted industrial clusters with regards to water, air and land pollution. Further, it has also been listed that with regards to air PM10, PM2.5 and CO are primary criteria pollutants, similarly, with regards to water pollution Total Phosphorous, Phenol and BOD are criteria pollutants and with regards to land/ground water Total Hardness, mercury and total dissolved solids are main criteria pollutants.

## Location

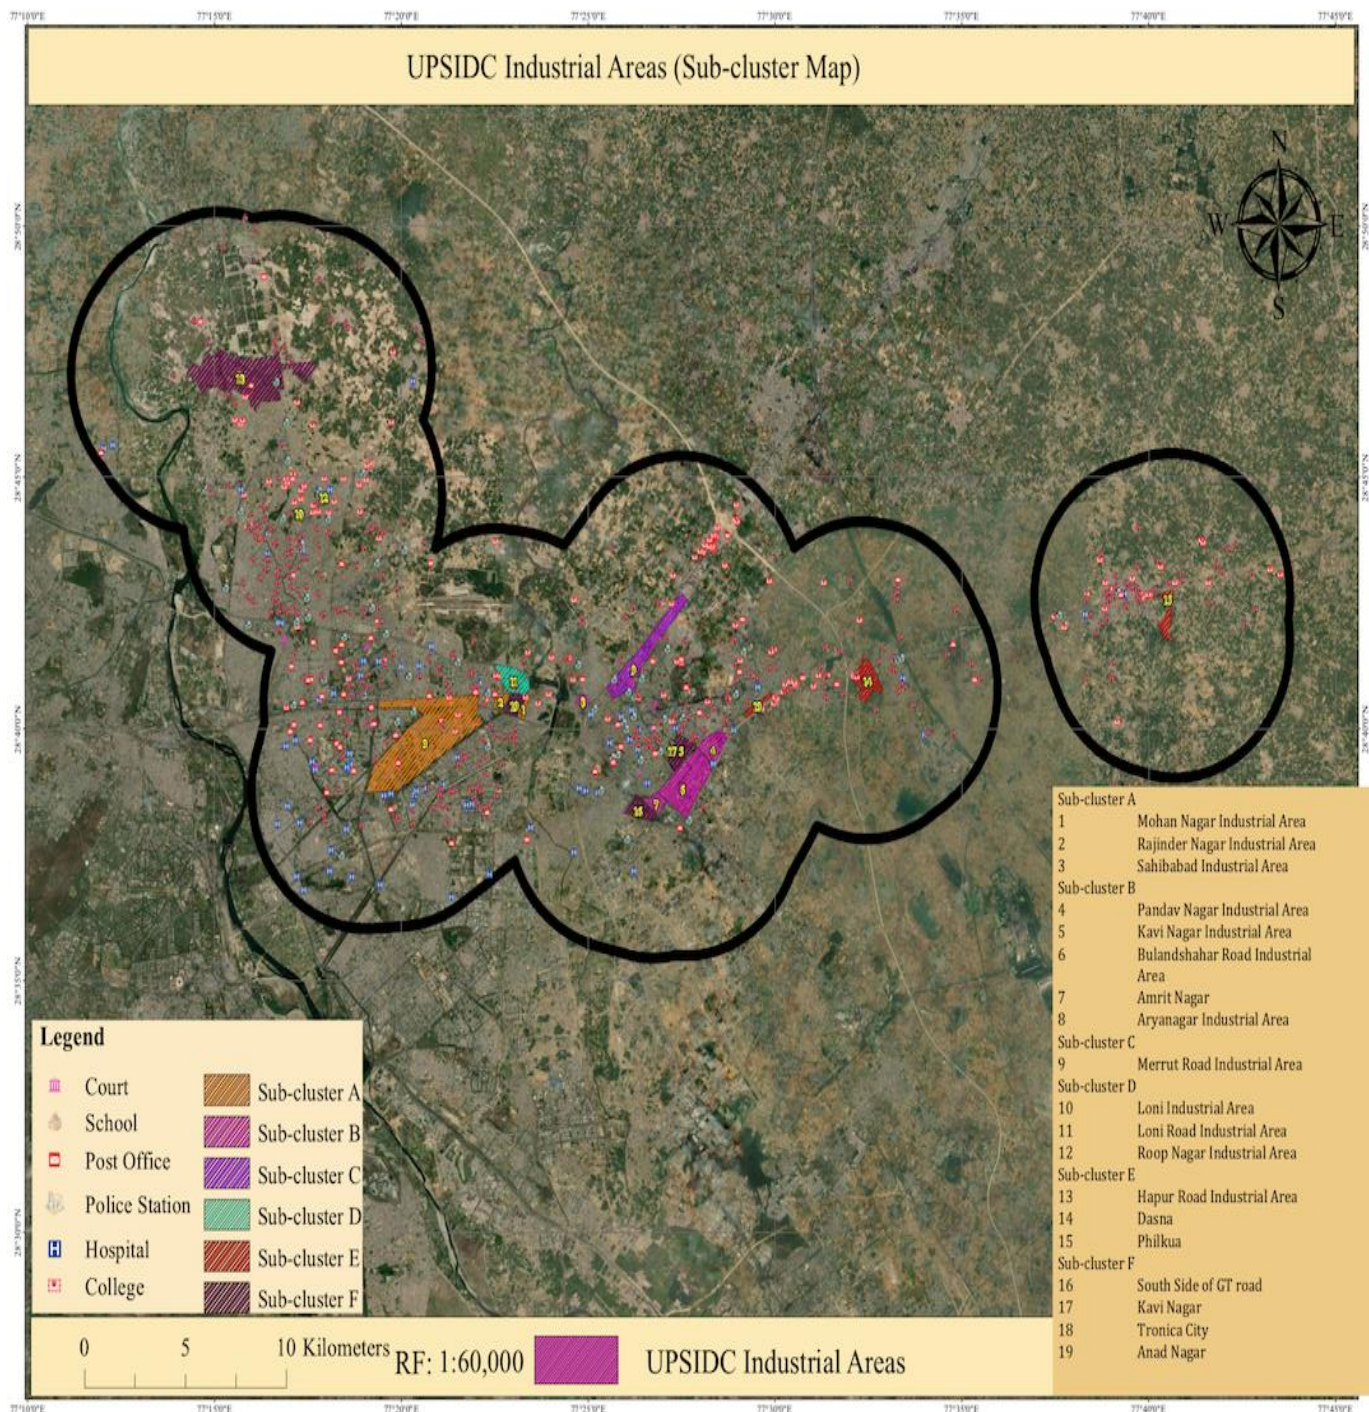

District Ghaziabad is located at **28° 40' 4.2816" N** and **77° 26' 59.2476" E**. It shares its northern border with Meerut and Baghpat, its southern part shares boundaries with Gautambudh Nagar and Bulandshahar and Hapur has been carved out from its eastern region. Ghaziabad also shares its border with NCT-Delhi on the south west part. Hapur is located at **28°43'12.00" N** and **77°46'48.00" E**. Location of District Ghaziabad and District Hapur in the map of Uttar Pradesh has been shown in *Figure 1* below.

## Digitized Map Showing Geographical Boundaries and Impact Zones

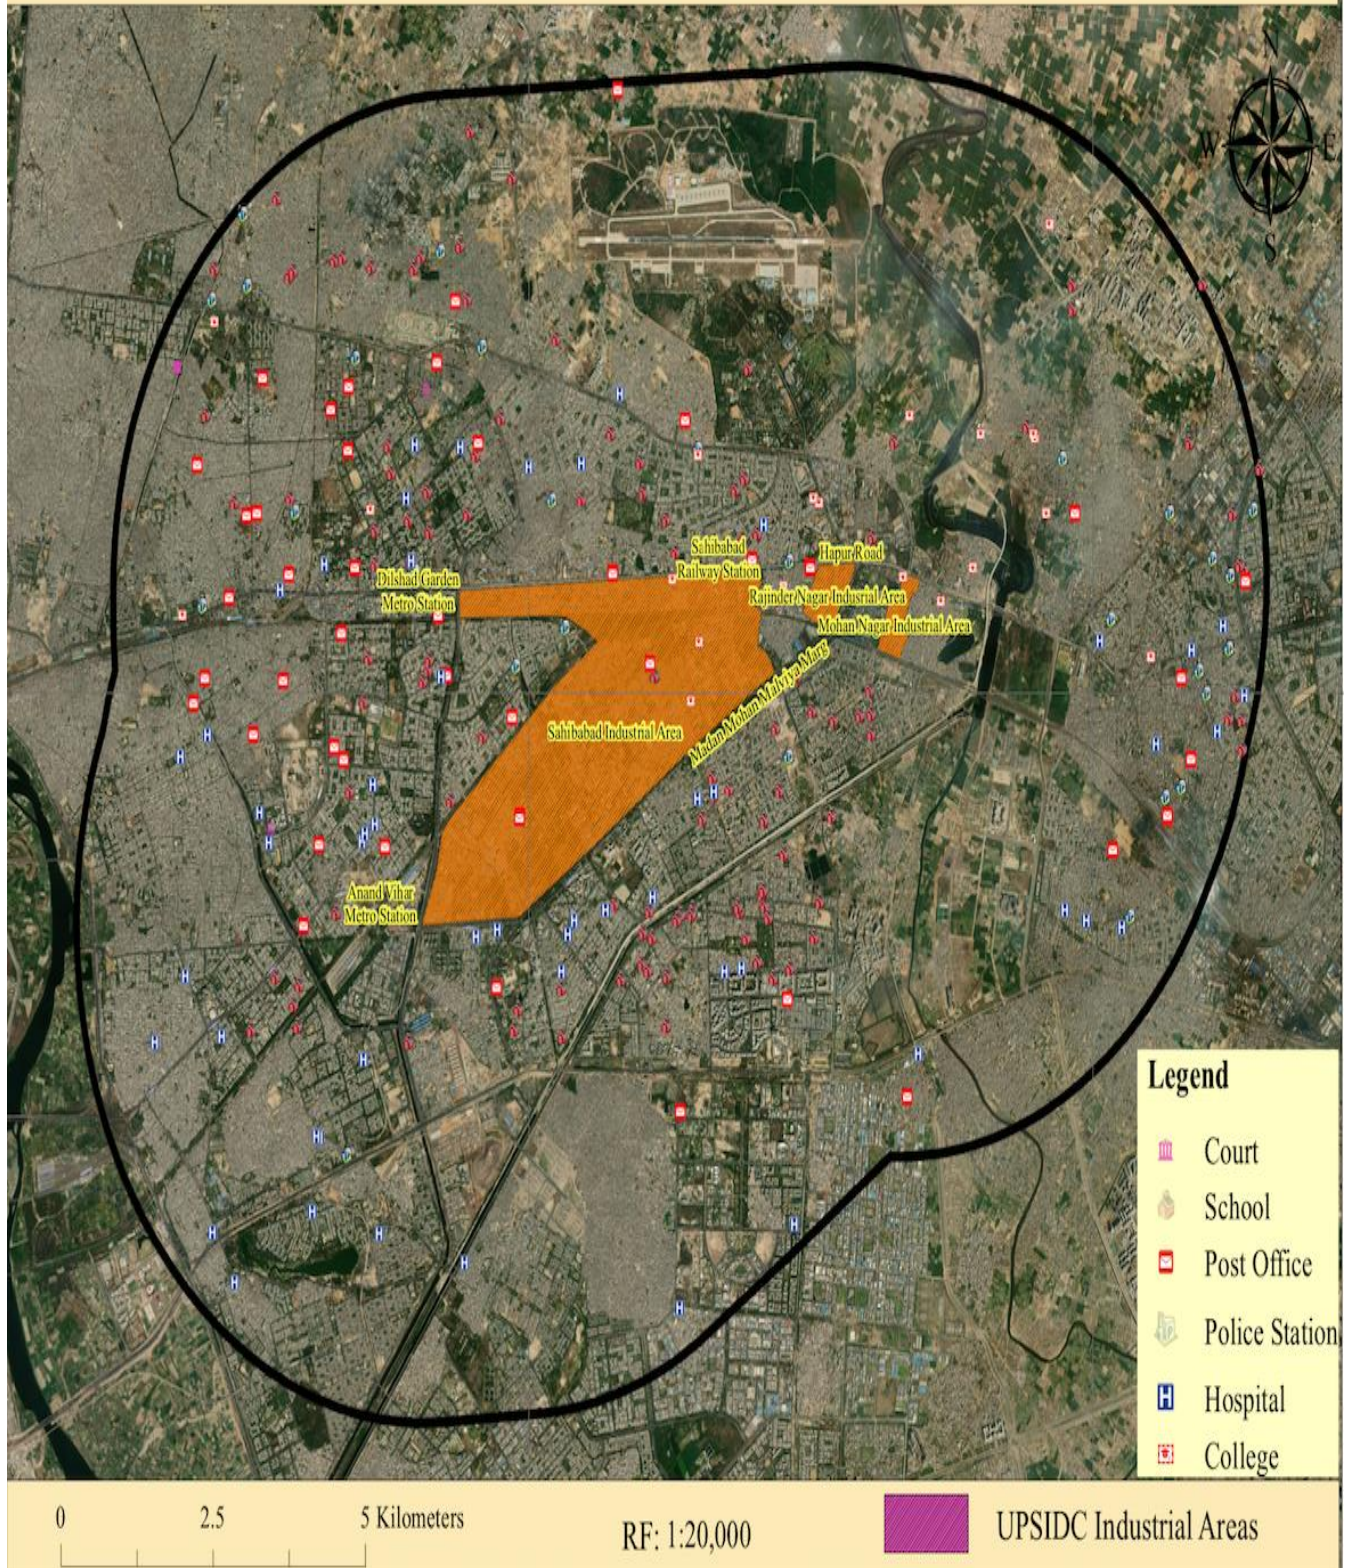

Combined digitized map of all 06 sub-clusters covering 18 industrial areas in Ghaziabad and 01 in Hapur region along with impact area boundaries, considering 5 kilometer as an impact area have been presented in *Figure 2*. Maps along with boundaries of impact zones for each sub-cluster have been presented in *Figure 3* to *Figure 8* on following pages.

### **3.5.3 OTHERS – Leachate from Dump Site/Agricultural Run-off**

#### **a) Solid Waste Dump Site**

Although collection of solid waste has improved; disposal and processing of solid waste collected remains a bottle neck with regards to management of solid waste in Ghaziabad. Presently, the processing of waste is being done on decentralized model only and remaining waste is being dumped in an unscientific manner. Earlier GNN used to dump their waste at Pratap Vihar site in Ghaziabad, however, same has been stopped in compliance of Hon'ble National Green Tribunal's order since 15.01.2019.

#### **Legacy Waste at Pratap Vihar, Ghaziabad**

Municipal solid waste dumpsite at Pratap Vihar, Ghaziabad is located at a distance of around 500 meters from River Hindon and is near residential area of UP Housing and Development Board. Municipal Solid Waste is being dumped on said site since 2012. The inspection of said site was carried out by a team of Regional Office, Ghaziabad on 04/01/2020 and 06/01/2020. As mentioned above, waste is not dumped on said site now and same was observed at the time of inspection. However, it poses an environmental hazard as well as public health hazard due to disposal of solid waste in an unscientific manner without any leachate management system or lining to prevent contamination of sub-soil and ground water. As per estimates, mixed municipal solid waste to the tune of almost 4,64,000 MT is presently lying on site. Satellite image of the said site and photographs taken on site shown below present a clear

picture of non-compliance of Solid Waste Management Rules, 2016 with regards to disposal, processing and management of waste.

**Ground water sampling**

**Figure 17:** Photographs taken on site during inspection of Pratap Vihar Waste Site

Board's team carried out ambient air quality monitoring on said site and also collected samples of leachate and ground water from site.

### **Analytical Results**

#### **Leachate Analysis report**

One Leachate water sample was collected on dated **4.01.2020**. The results of the physic-chemical parameters are represented in *Table 7*. The leachate sample collected from site had pH of **8.8**, TDS value of **17748 mg/l**, BOD value

**78.3 mg/L** and COD values were **78.3 mg/L** and **3860 mg/l**. Thus, all parameters were found to be beyond permissible limits.

**Table 21:** Analytical Results for Ground Water collected from Pratap Vihar, Ghaziabad

*# Except pH, Colour (Hazen), odour, TC and FC, and conductivity ( $\mu\text{s}/\text{cm}$ ), all values are in mg/l*

The groundwater sample was odourless and colourless but the pH value was observed to be **8.3** and Total hardness was **128 mg/l, which is beyond permissible limits**. Similarly, Chloride concentration was found above the prescribed limits of BIS and **TDS** of sample collected was **957 mg/l** which is above the prescribed standard limits. No Total coliform and Fecal coliform was not detected in the sample.

### **b) Agricultural Run-Off**

As per data from District Agriculture Office, Ghaziabad has an approximate agricultural area of around 52,000 hectare. Due to pressure on existing sources and to increase yielding capacity, pesticides are being used in agricultural fields which eventually contaminate either ground water by means of leaching or surface water due to run-off.

### **3.6 IMPACT ON SURROUNDING AREA (OUTSIDE THE CEPI AREA)**

Besides industrial load, drains also carry effluents from domestic households, unauthorized colonies and illegal establishments like dairies etc. which eventually has an impact on carrying capacity of the conveyance channel, pumping stations and waste water treatment facilities. Also, unabated abstraction of ground water for industrial, commercial, agricultural and domestic means has had an adverse impact on ground water levels of the region. Although CGWA's guidelines and NOCs have provisions like establishment of rain water harvesting structures and adoption of ponds to recharge ground water table, same has not reaped positive results due to wide gap in amount of ground water being abstracted and ground water being recharged which is eventually dependent on amount of rain fall.

### 3.8 EFFLUENT DISPOSAL METHODS- RECIPIENT WATER BODIES

Details of treatment facility, disposal means and receiving water bodies is as below:

S.No.	Polluted Industrial Area	Domestic Sewage Treatment Facility	Industrial Effluent Treatment Facility	Receiving Water Body
<b>Cluster A</b>				
1	Mohan nagar Industrial area	Untapped	Individual ETPs	Hindon
2	Sahibabad Industrial areas	Partially tapped by 74 MLD STP	Individual ETPs	Hindon/Yamuna
3	Rajinder nagar Industrial area	Partially tapped by 74 MLD STP	Individual ETPs	Hindon/Yamuna
<b>Cluster B</b>				
4	Pandav nagar Industrial area	Partially tapped by 56 and 70 MLD STP at Dundaheda and Vijay Nagar	Individual ETPs	Hindon
5	Kavi nagar Industrial area	Partially tapped by 56 and 70 MLD STP at Dundaheda and Vijay Nagar	Individual ETPs	Hindon

6	Bulandshahar Road Industrial area	Partially tapped by 56 and 70 MLD STP at Dundaheda and Vijay Nagar	Individual ETPs	Hindon
7	Amrit nagar	Partially tapped by 56 and 70 MLD STP at Dundaheda and Vijay Nagar	Individual ETPs	Hindon
8	Aryanagar Industrial area	Presently untapped as 30 MLD STP Sahdullabad, Loni is not operational	Individual ETPs	Yamuna
<b>Cluster C</b>				
9	Meerut road Industrial area	Untapped	Individual ETPs	Hindon
<b>Cluster D</b>				
10	Loni Industrial area	Presently untapped as 30 MLD STP Sahdullabad, Loni is not operational	Individual ETPs	Yamuna
11	Loni Road Industrial area	Untapped	Individual ETPs	Hindon
12	Roop Nagar Industrial area	Presently untapped as 30 MLD STP	Individual ETPs	Yamuna

		Sahdullabad, Loni is not operational		
<b>Cluster E</b>				
13	Hapur Road Industrial area	Partially tapped by 56 MLD STPs at Dundaheda ,Vijay Nagar and Givindpuram	Individual ETPs	Hindon
14	Dasna	Partially tapped by STPs at Dundaheda ,Vijay Nagar and Givindpuram	Individual ETPs	Hindon

### 3.10 ACTION PLAN FOR COMPLIANCE AND CONTROL OF POLLUTION

#### Short Term Action Points (upto 1 year, including continuous activities)

S. No	Action Points (Source and Mitigation)	Responsible Agencies/Stake Holders	Time Limit/Frequency
1.	<b>Water Pollution</b>		
a)	<b>Industrial Source</b> - Proposed Action Plan for effective control of Water Pollution: <ul style="list-style-type: none"><li>Regular effluent sample collection and analysis of Pollution Control System in Large &amp; Medium &amp; Small Scale Polluting Industries to be done to ensure strict compliance of prescribed Norms.</li></ul>	UPPCB Individual Industry	<b>Frequency</b> As per CPCB's directions under section 18(1)(b) dated 12.12.2019

	<ul style="list-style-type: none"> <li>Installation of energy meter, on line PH meter, automatic chemical dosing system, on line flow measurement and installation of independent laboratory to monitor critical parameters like MLSS, SVI etc. and other inlet and outlet parameters of ETP for Large &amp; Medium Industries and industries situated.</li> </ul>	Individual Industries (Large and Medium)	Ongoing
	<ul style="list-style-type: none"> <li>Upgradation of ETP in existing water polluting units is to be done on case to case basis. Under the upgradation plan, suitable tertiary treatment methods are to be installed in a time bound manner in order to ensure that treated water is recycled / reused to the maximum extend.</li> </ul>	Individual Industries. **3.10.1 EXISTING INFRASTRUCTURE FACILITIES-** Water quality monitoring network, etps, cetps, sewerage treatment plant of industry (STPs), surface drainage system, effluent conveyance channels/ outfalls etc.

In the core & impact zone of the identified PIAs in Ghaziabad water polluting industries have to mandatorily get effluent quality monitoring done as part of Consent to Operate conditions. No water polluting industry in any of the PIAs in the district discharges its effluent directly into a recipient water body. Treated effluent is being discharged into industrial/open drains whose details have been mentioned in earlier part of this action plan.

Besides this, Board also monitors the effluent quality at the industry, drains, STPs, CETPs and recipient water bodies. Frequency at which sampling is being done has been detailed in the table below.

S. No.	Category	Frequency
1	Industry – 17 Category	03 Months
2	Industry – Red Category	06 Months
3	Industry – Orange	01 Year
4	Industry – Green	02 Years
5	CETP/STP	Weekly
6	Drains	Chuiya/Kadradabad – Daily Garh/Fuldera – Weekly
7	Recipient Water Bodies (Hindon/Ganga/Kali)	Ganga – Daily Hindon – Fortnightly Kali - Daily

**Table 27:** Protocol for Monitoring

The parameters chosen for monitoring is very limited to understand the impact of discharges at the micro level without monitoring specific carcinogens and toxins.

### 3.10.2.3 Infrastructure Renewal

#### 3.10.2.3.1 Details of existing infrastructure facilities

Regional Office, Ghaziabad and Regional Laboratory are established in Board owned building. Regional laboratory is being upgraded by State Board in association with NMCG.

#### 3.10.2.3.2 Need of up gradation of existing facilities

The parameters chosen for computation of CEPI sub index for water environment include known carcinogens, probable carcinogens & other toxins. Existing infrastructure does not support monitoring of same hence the capacity of lab should be enhanced further with regards to manpower as well as area.

Besides this, strengthening with regards to man power is also essential considering the monitoring protocol for drains, STPs, CETPs, rivers and industries. Also, additional vehicles need to be allotted to the office for mobile teams and routine inspections. Also, the

The municipal solid waste collection facility in the PIAs and impact zone has to be strengthened in order to avoid pilling up of municipal

garbage within the industrial area and on the road sides which eventually leads to burning of waste.

#### **3.10.2.3.3 De-silting of water tanks, drains, revulets, etc.**

**The details of drains in the PIAs have been furnished in earlier part of the report.** Due to unabated disposal of solid waste/plastic in the drains they are choked at most of the stretches. Thus, frequency of desilting has to be increased. Also, sludge removed from drains is often left unattended by the side of the drains, same should be lifted as soon as possible and if possible, sludge drying area should be made an integrated part of the drain.

#### **3.10.2.3.4 Construction of lined drains/ connections**

All drains in industrial areas are not lined. It is important that they are lined first and connections are done in such a manner that flow is by means of gravity and pumping should be done only where necessary.

#### **3.10.2.4 Rejuvenation/ Management Plan for important eco-geological features-** Please provide details if any

No environmentally sensitive feature identified.

#### **3.10.2.5 Carrying of effluent from industrial units located in non- industrial locations to CETP facilities by lined drains/ pipelines only and prevention of other disposal into city sewerage/ surface drainage**

Presently on 02 CETPs are established and operational in Ghaziabad's PIAs. As clustering of industries is not permitted in non-industrial areas, establishment of CETP for such units would not be feasible.

#### **3.10.2.6 Installation of Gen sets at CETPs**

DG sets installed at both CETPs

### **3.10.3 Managerial and Financial aspects**

#### **3.10.3.1 Cost and time estimates:**

The approximate cost to be incurred to improve the existing infrastructure, drinking water and sanitation facility, MSW handling/collection infrastructure are to be assessed.

Also, it would be appropriate to engage a third party for complete inventorization of pollution sources and preparing a Pollutant Transfer Register for each of the identified PIAs. Project for same shall be prepared and required funding shall be worked out thereafter.

**3.10.3..2 Identified private/ public sector potential investors and contribution/ obligation:** If any, investment from private sector potential investors please provide details.

Appropriate agencies will be identified after finalization of action plan.

#### **3.10.3.3 Government Budgetary support requirement**

Finalized action plan will be submitted to the Government seeking financial support wherever necessary.

#### **3.10.3.4 Hierarchical and structured managerial system for efficient implementation**

UPPCB in association with stakeholders at regional level will oversee the implementation of finalized action plan under the Chairmanship of District Magistrates.

**Table 35:** Primary Industrial Air Pollution Sources and Pollutant Types

## 5.2 Sources of air pollution viz industrial, domestic (coal and biomass burning), natural and transport and heavy earth movers

Source apportionment study with regards to various sources in the region has been awarded to IIT-Delhi.

## 5.3 Air Polluting Industries in the area/ cluster

Clustuer	Number of Air Polluting industries	Cluster - Coordinates	
		Latitude	Longitude
A	150	As per Table 4	
B	115		
C	16		
D	87		
E	25		
F	126		

**Table 36:** PIA wise distribution of Air Polluting Industries

## 5.4 Impact of activities of nearby area as the CEPI Area

Ambient air quality in an area is dependent on various factors in the air shed. No specific study with regards to impact of specific CEPI area on nearby areas outside the PIAs has been carried out.

## 5.5 Quantification of the air pollution load and relative contribution by different sources

Source apportionment study with regards to various sources in the region has been awarded to IIT-Delhi.

S. Nos	Identified damaged roads	Length	Remarks
1	Sahibabad Industrial area	32 stretches of Roads	Under the Sahibabad Action Plan submitted by UPPCB to CPCB, 32 stretches of roads have been identified. Municipal Corporation have been directed to repair the identified stretches on priority.

Apart from this, list of road stretches which need repair and traffic congestion hotspots have been identified. Steps for abatement of air pollution on such stretches are being initiated by concerned land owning agencies.

### 5.6.3 Impact on CEPI score after installation/ commissioning of full fledged air pollution control systems

CEPI scores assessed by Central Pollution Control Board has shown a decreasing trend in Air, Water and Land CEPI. Scores shall be evaluated on regular basis to assess impact of installation of APCS and other control measures taken.

### 5.7.1 Data linkages to SPCB/ CPCB

Presently none of the industry has installed an independent CAAQMS.

# **Land Environment**

## **6 LAND ENVIRONMENT (Soil and ground water)**

### **6.1 Soil contamination**

#### **Present status of land environment supported with minimum one-year data**

Test regarding soil contamination is not being carried out by State Board. Data regarding contamination not available.

#### **6.1.2. Critical locations for land/soil pollution assessment and ground water monitoring**

Issue of ground water pollution has been a persistent issue in Meerut Road Industrial Area. Industries like M/s Shri Ram Piston & Rings Ltd., M/s Mascot India Ltd., M/s Kathuria Brothers and M/s Marshall Cycles have jointly undertaken remediation of ground water in the area. Assessment of land pollution should also be assessed.

#### **6.1.3. Present levels of pollutants in land / soil and ground water (routine parameters, special parameters and water toxics relevant to the area in three categories- non carcinogens, probable carcinogens and other toxics)**

Test regarding soil contamination is not being carried out by State Board. Data regarding contamination not available.

#### **6.1.4. Pre dominant sources contributing to or posing danger of pollution of land and ground water**

<b>S. No</b>	<b>Sources</b>	<b>Percent contribution</b>	<b>Main Pollutants</b>

<b>2</b>	MSW dumping in Pratap Vihar	N/A	Leachate
<b>3</b>	MSW dumping in Shakti Khand – IV, Indrapuram	N/A	Leachate

Besides this other areas where solid waste dumping has been done historically should be surveyed and assessment be done by third party for soil contamination

### 6.1.5. Sources of soil contamination

As per 4.1.4. Test regarding soil contamination is not being carried out by State Board. Data regarding contamination not available.

### 6.1.6. Types of existing pollution

As per 4.1.4.

### 6.1.7. Remedies for abatement, treatment and restoration of normal soil quality: Please provide details and treatment methods adopted

Plan for treatment of legacy waste under progress. Specific plan for abatement, treatment and restoration of soil quality shall be carried out through expert third party institutes if required.

**GROUND WATER REMEDIATION IN AND AROUND LOHIANAGAR GHAZIABAD**

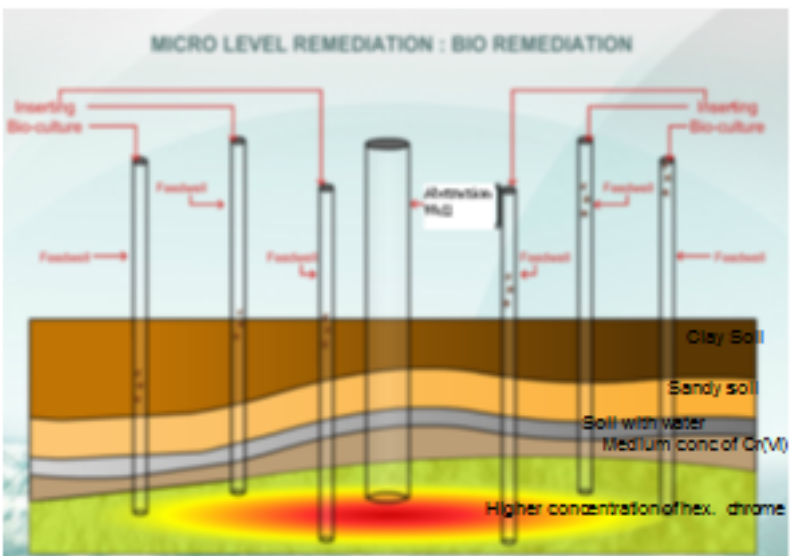

**PROCESS SEQUENCE FOR PUMP & TREAT METHOD**

## GROUND WATER REMEDIATION IN AND AROUND LOHIANAGAR GHAZIABAD

- The latest Technology on remediation of chrome contaminated site is BIO-REMEDIATION. This technology acclimatized to Indian condition, was developed and patented by I.I.T-Madras.
- The bio-culture is fed systematically to the contaminated area and the required amount of nutrients are fed from time to time.
- The bio-culture converts the hexavalent chromium to trivalent chromium which remains in undissolved condition into the soil. The water eventually becomes free of the hexavalent chromium

### BIO-REMEDIATION

#### Essential Requirement for Effective bio-remediation:

- For effective bio-remediation, SPRL had requested District Administration to stop abstraction of ground water through several submersible pumps installed by Municipal Corporation and residents in the area around the contaminated zone. This will also avoid drifting the contaminated water in uncontrolled condition, which may increase the bio-remediation implementation time.
- Adequate water supply for domestic consumption was to be ensured by Municipal Corporation, Ghaziabad for which two tube wells of 40000 to 50000 Litres/Hour Capacity were handed over in 2010 by SPRL. 9

### **6.2.5. Treatment and management of contaminated ground water bodies etc:**

As per point number 4.2.2.

### **6.2.6. Impact on CEPI Score after abatement of pollution:**

The industries within the cluster are in confirming to measures to store hazardous & non-hazardous wastes in proper manner to prevent any contamination. Hence the CEPI score will come down on implementation of action plan.

#### **Justification:**

As a result of recycling and scientific disposal of hazardous & solid wastes, the ambient pollutant concentration (factor: B1) will undergo reduction, consequently reducing the impact on people and eco-geological features (factor: B2&B3) and level of exposure of the local population (factor: C2).

The hazardous wastes, like spent oil, generated from the utilities of all the industries are collected and sent to Recyclers and landfill able Hazardous waste is sent to TSDF.

The bio-medical waste generated in the cluster is handed over to the common bio-medical waste treatment facility located in District Hapur and District Meerut for safe disposal.

The up gradation of infrastructure will result in better handling of solid waste generated within the region, thus reducing the additional risk element (factor D).

## **6.3 Solid Waste Generation and Management**

### **6.3.1. WASTE CLASSIFICATION AND QUANTIFICATION**

UPPCB has classified wastes according to the Rules and Notifications and quantified each category. However, the work of inventorization of different types of non-hazardous waste generated in the core & impact zone of the study area will be carried within the time frame as per action plan. All the identified cluster except Loni area cluster falls under the jurisdiction of Municipal Corporation Ghaziabad. Disposal of non-hazardous waste in Loni is

carried out by NagarPalika, Loni. It is the responsibility of Municipal Corporation, Ghaziabad and Loni Nagar Palika, Ghaziabad for disposing the solid waste scientifically. Presently there is no proper solid waste collection and scientific mechanism mechanism. The industrial non-hazardous solid waste is disposed to respective recyclers.

### 6.3.1.1. HAZARDOUS WASTE

2	Hapur – 08 Recyclers 08 Dismantlers	170500MT/Year 45400MT/Year	Granted/Under renewal

#### 3. MUNICIPAL SOLID WASTE/ DOMESTIC WASTE/ SLUDGE FROSTPS/ETPS/CETPS AND OTHER INDUSTRIAL SOURCES

There is no Municipal Solid Waste disposal facility within the area. Although the solid waste in the study area is quantified by Municipal Corporation, Ghaziabad there is no proper disposal mechanism of the solid waste from the Municipal Corpotation area. With respect to industrial non-hazardous solid waste, the same is disposed to end users and the sludge

from the ETP and CETP is handed over to operator of TSDF and the STP sludge is used as manure.

#### 4. PLASTIC WASTE

**6.4.2. Present Status / Performance And Need Up Gradation Of Existing Facilities Including Enhancement Of Capacities:** Please provide details

**1. Treatment And Management Of Contaminated Waste Disposal Sites Etc:**

Ground water analysis at the dumpsite has been carried out by UPPCB. As per the report, there is no ground water contamination found due to Waste disposal sites.

**2. Impact On CEPI Score After Proper Management Of Solid Waste**

Presently there is no scientific disposal of solid waste processing. After implementing scientific solid waste management measures CEPI score will come down substantially.

**3. Identification of Stockholders/agencies to be involved and to evolve financial managerial mechanism for implementation of PPP projects.**

After finalization of action plan private participation will be explored.

**6.5 Other infrastructural Renewal Measures**

6.5.1 arge scale plantation drives have been carried out in the State of U.P./ Likewise, in Ghaziabad, in 2018-19, 6,21,654 saplings were planted in a single day; in year 2019-20, 9,57,515 saplings were planted in a single day and target for present year is of 6,72,690 saplings. Besides this plantation by concerned authorities and private players are carried out from time to time.

**6.5.2 Development of Industrial Estate(s)**

Area is being developed in accordance with approved Master Plan duly approved by NCR Planning Board.

### **6.5.3 Development / shifting of industries located in the non industrial areas to the existing/new industrial estates.**

Illegal clustering has been observed regularly in the District. District Magistrate has constituted committee of District Administration, UPPCB, Electricity Department, Ghaziabad Development Authority, Local Bodies and Police for regular survey of the industries in residential areas and for closing down the polluting industries. More than 1500 illegal industries have been closed down in the district. More than 320 illegal units have closed down in the last 06 months. Most of the illegal clustering have been observed near the Delhi Border of Ghaziabad District in Loni and Sahibabad areas. Polluting industries like Textile and Dyeing, Foundries and E – Waste Processing units have been observed in the residential areas. To stop the illegal clustering of industries in residential areas of Loni, it is mandatory that no industrial electricity connection to any industry in residential areas. Further, Ghaziabad Development Authority should demarcate the areas where units are operating against the land use as per Master Plan and take necessary action against these units as per law/ demolition of illegal units against the master plan. It should also be ensured that the illegal industries which are being closed down by the joint committee should not be allowed to operate again in the residential areas.

## **6.6 . Specific Schemes:**

### **6.6.1. GIS-GPS System for pollution sources monitoring**

At present there is no such system for pollution sources monitoring. The possibility will be explored.

### **6.6.2. Hydro- geological fracturing for water bodies rejuvenation**

Near Meerut road industrial area, Lohiya Nagar residential area has been affected by groundwater pollution due to chromium. Remediation work by pump and treat method

and bio- remediation is being done by M/s Shri Ram Piston and Rings Ltd. Hydrogeological survey by technical agency is recommended to be carried out in all the industrial area pre monsoon and post monsoon to have a detailed groundwater report and for identification of point source.

### **6.6.3. In-situ remediation of sewage**

State has formulated a policy for management of Sewage, Fecal and Septage. Same is being implemented for ex-situ and in-situ management of domestic waste water.

### **Utilization of MSW inert by gas based brick kills**

Presently all the brick kilns are coal based. A plant is proposed in garh- Mukteshwar area of Hapur, however, same is outside the boundary of PIAs within CEPI

### **6.6.4 Co- processing of wastes in cement industries**

No Cement industry is situated in the District.

### **6.6.5 Public awareness and training programs**

District Administration, Nagar Nigam and UPPCB are conducting both public awareness & training programmes in the field of environment management for the stakeholders in co-ordination with industries, NGOs, educational Institutes & other Government departments.

### **6.6.6 Overall impact on installation/commissioning of pollution control equipment/ measures on the CEPI score**

- **Water Pollution**

Although all the industries in the industrial clusters have installed ETPs for treatment of industrial effluent, modification and switching on the

latest technologies w.r.t Effluent treatment Plants is recommended to bring down the CEPI scores. Following measures will reduce the pollution load being added by the discharge of treated effluent into the drains

- All the textile industries must install biological treatment.
- Water intensive units should be promoted to reuse the treated water in the process wherever feasible.
- Distilleries must be promoted to install incinerator to utilize the concentrated spent wash.
- CETPs must reuse the high amount of treated effluent generated for irrigation purpose.
- Separate treatment of sewage being discharged untreated from the industrial units and nearby residential cluster
- Strict enforcement to close down illegal industries operating in residential areas.

- **Air Pollution**

No Sugar and Distillery industries are presently identified in the identified Clusters. All large and medium scale air polluting industries have installed OCEMS for monitoring of emissions from the chimney. Following

- Installation of Flue Gas Desulfurization (FGD) technology options for removing the SO<sub>2</sub> produced by coal-firing
- Bio- Mass Co- Firing. Biomass is treated as “carbon neutral,” i.e., a zero contributor of CO<sub>2</sub> to the atmosphere. The reasoning is that the CO<sub>2</sub> emitted in the combustion of biomass will be reabsorbed
- In most of the industrial area apart from Loni area of the District, PNG gas has been made available. The industries must be promoted to switch to cleaner fuel wherever the PNG gas is available.
- Strict enforcement to close down illegal industries operating in residential areas.

- **Ground Water Pollution**

Near meerut road industrial area, Lohiya Nagar residential area has been

effected by groundwater pollution due to chromium. Remediation work by pump and treat method and bio- remediation is being done by M/s Shri Ram Piston and Rings Ltd. Hyrogeological survey by technical agency is recommended to be carried out in all the industrial area pre monsoon and post monsoon to have a detailed groundwater report and for identification of point source.

### **6.7 Assessment of techno-economic feasibility of pollution control system in clusters of small/medium scale industries**

Study of techno-economical feasibility of pollution control systems in clusters of small/medium scale industries has not been carried out.

#### **Land Pollution**

- Short- Term Action Points**

<p><b>1</b></p>	<p><b>Proper Storage &amp; Disposal of Hazardous Waste &amp; Solid Waste</b> The status of Hazardous Waste Disposal are as follows:</p>	<p>Individual Industry</p> <p>UPPCB</p>	<p>To send waste every 03/04 months to TSDF</p> <p>To monitor individual industries every six months.</p>
<p><b>2</b></p>	<p><b>Bio-Medical Waste Disposal</b> member of authorized Common BMW Treatment Facilities Regular Inspection and monitoring of Hospitals / Nursing Homes has to be done</p>	<p>Regional Office, UPPCB</p>	<p>Inspection of Big Hospitals Every 03 months &amp; Small Hospitals every 06 months by UPPCB.</p>

- **Long Term Action Points (More than 1 year)**

S.No.	Action Points (including source and mitigation measures )	Responsible Stack Holder	Time Limit
	<p><b>Development of Green Belt</b> Development of green belt from 20% to 33% of the total area.</p>		Ongoing
	<p><b>Land Pollution</b></p> <p><b>Soil Testing</b></p> <p>Soil testing of some large scale industry has been done and is being carried out every month. Soil testing in all 3 industrial clusters of Noida is proposed to be done for different metals like Pb, Cr, Cu, Fe etc. twice a year through recognise laboratory.</p>	UPPCB	01 Year
	<p><b>Study of impact on Human Health of Water &amp; Air Pollutants</b></p>	IITR (Earlier ITRC) / Any other designated Agency	
	<p><b>Municipal solid waste Disposal</b></p> <p>At present Municipal solid waste is disposed as landfill in low lying areas. Authority should develop proper MSW facility as per MSW Rules at Proper site. Quantification of MSW.</p> <p>Site selection for MSW disposal.</p> <p>Strategy for implementation / setting up of integrated facility for MSW to be decided in consultation with local civic</p>	Project proponment to give compliance report to UPPCB.	Every 3 months

	<p>authority and implemetaion to be done in time bound manner.</p> <p>Upcoming High Rise Buildings, Commercial Project, Educational Institution, Multi Plexes, Town ship &amp; Building Projects are major source of Municipal Solid Waste. Such projects must ensure setting up of in house MSW disposal facilities as per MSW Rules &amp; ensure compliance of the conditions of the Environment Clearance.</p>

## 7.0 Recommendation for Amendment of Clusters

Complete cluster map for the region has been shown in Figure 2, thereafter cluster-wise maps have been presented in Figure 3 -8. As can be seen in Figure 4, Figure 6, Figure 7 and Figure 8 that distribution of clusters is in a sporadic manner due to which defining of drains, ecological features and other such critical inputs for clusters is not possible. Thus, in view of it is important to reassess the clustering. Ideal clustering for getting true representation of each industrial cluster should be as below.

S. No.	Proposed Cluster	PIAs	PIA Added	PIA Removed
1	Cluster A	<ul style="list-style-type: none"> <li>• Mohan Nagar</li> <li>• Rajinder Nagar</li> <li>• Sahibabad Industrial Area</li> <li>• Loni Road Industrial Area</li> <li>• Anand Nagar Industrial Area</li> <li>• Prakash Nagar</li> </ul>	<ul style="list-style-type: none"> <li>• Loni Road Industrial Area from Cluster D</li> <li>• Anand Nagar from Cluster F</li> <li>• Prakash Nagar from Cluster F</li> </ul>
