FOREWORD

Regular assessment of ambient air quality is necessary to improve understanding of levels of various air pollutants and evaluate the effectiveness of abatement programmes. The Hon'ble Prime Minister of India has launched the National Air Quality Index (NAQI) on April 6, 2015 with the objective of galvanizing action towards improving the air quality in areas where the Index indicates high levels of pollutants. It is desirable to disseminate information related to air quality in simple language so that public awareness regarding the issue can be improved.

At the time of launch of NAQI, 10 cities in India had Continuous Ambient Air Quality Monitoring Systems (CAAQMS). The number of cities now covered by CAAQMS have grown to 24 spread across 10 States.

An exercise has been carried out by CPCB to compile the information based on the data from these stations. It is expected that this compilation will prove useful for implementation of various action plans drawn up by the cities for air quality management.

I acknowledge the contribution made by Dr. D. Saha, Scientist 'E' and Sh. S.K. Sharma, Scientist 'C' and his team.

(Arun Kumar Mehta)

THE TEAM

Team Leader	:	Dr. A.B. Akolkar, Member Secretary
Report Conceptualization & Supervision	:	Dr. D. Saha, Scientist 'E' & Incharge, Air Laboratory
Co-ordination	:	Sh. S.K. Sharma, Scientist 'C'
Contributors	:	Sh. S.K. Sharma, Scientist 'C' Sh. Neeraj Katiyar, SSA Sh. Gautam Tiwari, JRF Ms. Neelam Pandey, SA
Report Design and Preparation	:	Sh. Gautam Tiwari, JRF

NATIONAL AIR QUALITY INDEX

Air pollution has been a matter of environmental and health concerns, particularly in urban areas. Central Pollution Control Board along with State Pollution Control Boards has been operating National Air Monitoring Program (NAMP) covering 240 cities of the country. In addition, continuous monitoring systems that provide data on real-time basis are also installed in few cities.

Hon'ble Prime Minister launched National **Air Quality Index** (AQI) on 6th April, 2015 to monitor air quality in major urban cities across the country on a real-time basis and to enhance public awareness. Air Quality Index (AQI) is one such tool for effective dissemination of air quality information to people. As a part of this, Union Environment Ministry proposed to extend the measurement of air quality on real time basis in 22 state capitals and 44 other cities with a population of more than one million. This index will help the people know about the level of pollution in the ambient air on daily basis. The AQI Display has been increased from the initial 10 cities to currently 24 cities in 10 states of India. At present, total 43 Continuous Ambient Air Quality Monitoring Stations all over the country are connected with NAQI (**Table-II**).

Under the current measurement of air quality, 8 parameters are kept for calculating AQI. The proposed AQI will consider eight pollutants (PM₁₀, PM_{2.5}, NO₂, SO₂, CO, O₃, NH₃, and Pb) in which one of PM₁₀ or PM_{2.5} parameter is mandatory. There are six AQI categories, namely Good, Satisfactory, Moderately polluted, Poor, Very Poor, and Severe. The AQI values and corresponding ambient concentrations (health breakpoints) as well as associated likely health impacts for the identified eight pollutants are as follows:

AQI Category, Pollutants and Health Breakpoints								
AQI Category (Range)	PM ₁₀ 24-hr	PM _{2.5} 24-hr	NO ₂ 24-hr	O ₃ 8-hr	CO 8-hr (mg/m ³)	SO ₂ 24-hr	NH ₃ 24-hr	Pb 24-hr
Good (0-50)	0-50	0-30	0-40	0-50	0-1.0	0-40	0-200	0-0.5
Satisfactory (51-100)	51-100	31-60	41-80	51-100	1.1-2.0	41-80	201-400	0.5 –1.0
Moderately polluted (101-200)	101-250	61-90	81-180	101-168	2.1- 10	81-380	401-800	1.1-2.0
Poor (201-300)	251-350	91-120	181-280	169-208	10-17	381-800	801-1200	2.1-3.0
Very poor (301-400)	351-430	121-250	281-400	209-748*	17-34	801-1600	1200-1800	3.1-3.5
Severe (401-500)	430 +	250+	400+	748+*	34+	1600+	1800+	3.5+

**One hourly monitoring (for mathematical calculations only)*

Table-I: Shows health statements for every AQI category for people to understand health effects and protect themselves from these effects.

AQI	Associated Health Impacts
Good (0–50)	Minimal Impact
Satisfactory (51–100)	May cause minor breathing discomfort to sensitive people.
Moderate polluted (101–200)	May cause breathing discomfort to people with lung disease such as asthma, and discomfort to people with heart disease, children and older adults.
Poor (201–300)	May cause breathing discomfort to people on prolonged exposure, and discomfort to people with heart disease
Very Poor (301–400)	May cause respiratory illness to the people on prolonged exposure. Effect may be more pronounced in people with lung and heart diseases.
Severe (401-500)	May cause respiratory effects even on healthy people and serious health impacts on people with lung/heart diseases. The health impacts may be experienced even during light physical activity

The web-based system is designed to provide AQI on real time basis. It is an automated system that captures data from continuous monitoring stations without human intervention, and displays of Daily AQI bulletin is based on running 24 hr average values (e.g. AQI Bulletin at 5 pm on a day will incorporate data from 4 pm on previous day to the current day).

The following tables are presenting Month wise Ambient Air Quality Status of various cities across India:

IMPORTANT POINTS:

- “*” Symbol used in the tables indicates station not connected to prepare NAQI.
- “No Data” indicates that Station not featured in AQI Bulletin on particular day.
- Tables are representing Month wise AQI values with colour coding of various stations by the time connected to prepare AQI Bulletins.
