

## **Comprehensive Industry Document on Edible Oil & Vanaspati Industry Foreword**

According to the mandate assigned, the Central Pollution Control Board is to collect, collate and disseminate information relating to measures for prevention and control of pollution. In pursuance of this mandate, an important activity of the Board has been the preparation of a series of industry specific documents. These documents are to provide information on the status of various categories of industries in the country in respect of number of units, their locations, capacities, manufacturing process, wastewater generation and characteristics, and unit processes for treatment and control of discharge and emissions of pollutants. The effluent and emission standards also form part of these documents. Best practicable technologies currently available and its economic viability are the basis on which the standards are evolved. Economic viability has been assessed based on cost computations expressed as total annual burden due to pollution abatement and control as a percentage of total annual turnover.

The present document on 'Edible Oil and Vanaspati Industries' is one in the series. We hope, the document will be useful to the industries, regulatory agencies, consultants and others involved in pollution control in Edible Oil and Vanaspati Industries.
