Impacts of Dussehra Festival on River Hugli (a Case Study) Foreword

The Dilli-Disang is a tributary to the mighty river Brahmaputra. The industrial activities in the Namrup area in Sibsagar district are causing pollutional stress on the Dilli-Disang. The Central Board through the Assam State Pollution Control Board has been persuading the industries to control the pollution and its origin.

The present compilation is the first attempt to inventorise the pollution potential and relevant sub-basin-wise characteristics of the Dilli- Disang. This would help in compiling information on the entire Brahma- putra river basin.

The basic report was prepared by Shri M.K. Sharma of Assam State Pollution Control Board as one of the four projects funded by the Central Board on the basis of the recommendation of Dr. R.N. Bhattacharyya of Central Board in September, 1982.

Dr (Mrs) K.K. Saxena edited the report in the final form and was , assisted by Shri R.M. Bhardwaj at relevant Chapters. Shri K. Barah reviewed the final report to ensure that it is factually correct. Useful suggestions were also provided by Dr. S.P. Chakrabarti. Mr. Bonya Basu prepared the maps and tracings. Shri Premankur Barua typed the manuscript.
