### Water Quality Status & Statistics (2001) Foreword

The Central Pollution Control Board (CPCB) in collaboration with the State Pollution Control Boards (SPCBs) is monitoring the water quality at 784 sites in different parts of the country. The monitoring sites are located on the major rivers, medium and minor rivers, lakes, canals, creeks, ponds, drains, tanks and ground-water resources. Monitoring is conducted by respective State Pollution Control Boards on monthly or quarterly basis except at 3 locations of Gangotri, Yamunotri and Hanumanchatti of Ganga Basin where monitoring is done on an yearly basis. The data is transmitted by State Pollution Control Boards through a computerised network and data sheets. After collating and processing the data, CPCB brings out reports on Water Quality Status and Statistics on yearly basis for dissemination of information.

Water quality status vis-a-vis standards at individual sites indicating critical parameters (in case of deterioration) is also updated regularly on CPCB's web site. The present report is the twelfth of the series on Water Quality Monitoring Statistics.

The present report gives the water quality status and statistics of various rivers, lakes, canals, creeks, ponds, tanks, drains and wells for the year 2001. The water, quality profiles alongwith findings of 14 major rivers have been presented in Chapter 2 and Water Quality Status vis-a-vis standards at the individual sites indicating critical parameters (in case of deterioration) is provided for each riverine system in Chapter 3, for lakes, canals, creeks, ponds, drains & tanks in with water quality management in the country.
